EXPERIENCE

Code & Craft

Web Designer & Developer | August 2016 - May 2017

Web designer and developer focused on designing, building and launching mobile responsive web applications by utilizing Agile and Google Sprint's methodology through rapid prototyping and iterating on feedback.

Primary responsibilities include leading efforts in product and user research, designing solutions, implementing through rapid development, shipping the product and iterate through user feedback. Daily managerial tasks include defining what success looks like for the company while reviewing project statuses against targeted deadlines and managing expectations among team members.

Featured projects included:

- A video education and networking site that allows students to connect with young professionals in the tech industry.
- A search driven web application for users to learn about Indo-European Root Words targeted towards the education and Spelling Bee sector.

- Develop, document and lead Quality Assurance testing between separate engineering teams from various companies for a large commerce project.
- A new company website built with React and blog built using Ghost.
- Develop an engineer stack utilizing React and Redux to bootstrap new projects.
- Online developer documentation for internal company dashboards.

Squarespace

Design & Development Specialist | September 2013 - August 2016

Design and Development Specialist in Customer Operations focusing on building internal tools and external microsites. Additional responsibilities include assisting Squarespace Developer Platform users with developer-specific and template design-specific needs.

Apple

Family Room Specialists | February 2011 - March 2013

Focused on customer server by selling complete solutions to consumers and as a mobile technician troubleshooting software and hardware issues while repairing mobile devices.
